ANUSHTHA SHARMA

Ranchi, Jharkhand | 91+ 829458259 | anushthasharma30@gmail.com
LinkedIn: https://www.linkedin.com/in/anushtha-sharma31/

SUMMARY.

Hands-on experience through internships as a **Full Stack Developer**, Specializing in **Python** and **AI/ML** on the **AWS cloud** platform. Skilled in designing scalable applications, deploying ML models, and building data pipelines using modern tools and microservices architecture. Eager to learn new technology quickly and to apply a broad knowledge of computers. Gained practical experience in deploying and debugging web applications in real-world environments. Learned how industries use SAP to manage and store data efficiently.

EDUCATION

B. TECH in Computer Science & Engineering, Sarala Birla University (SBU), Ranchi, Jharkhand, 2026

TECHNICAL PROFICIENCY

- **Programming Languages**: Python, Node.js, Java, JavaScript, SQL
- **Frameworks & Libraries**: Scikit-Learn, OpenCV, Jupyter Notebook, React.js
- **Cloud Technologies**: AWS (EKS, EC2, Lambda, S3)
- **Databases & Data Storage**: MongoDB, PostgreSQL,
- **Machine Learning Techniques**: NLP, Computer Vision, Deep Learning, Reinforcement Learning, RNNs, Clustering, Regression, Classification, CNNs
- **Data & Pipelines**: Data Preprocessing, ETL Basics, Pipeline Development
- **DevOps & CI/CD**: Git, CI/CD Pipelines
- **APIs & Microservices**: RESTful APIs, Microservices Architecture, API Integration
- **Version Control & Collaboration Tools**: GitHub, JIRA

PROFESSIONAL EXPERIENCE

Python Developer (AI & Cloud), June 2025/ August 2025
Dilwado.com

Project 1: **AI PDF Converter & Reader**

- Developed and improved an AI-powered PDF processing system to extract, analyse, and enhance document data using machine learning techniques.
- Built intelligent features such as text extraction, keyword detection, and content classification to improve document usability and predictive accuracy.
- Enhance a responsive front-end using HTML, CSS, JavaScript, and jQuery, improving user interaction and accessibility across devices.
- Merge the backend logic for PDF parsing and data handling, enabling efficient file conversion and real-time processing.
- Implemented optimized data pipelines for handling large PDF files, reducing processing time by 20–30% during testing on 50+ documents.

Project 2: **IT SUPPORT Ticket System (Full-Stack Project)**

- Architected and developed a full-stack IT support system using React.js, Node.js, SQL, and MongoDB for efficient ticket management.
- Planned RESTful APIs to handle ticket creation, updates, and user authentication, ensuring secure and scalable operations.
- Built an interactive UI enabling 50+ test users to submit, track, and manage support tickets in real-time.
- Improved the admin dashboard for monitoring ticket status, analytics, and workflow management.
- Implemented real-time communication and rich-text support for detailed issue reporting and faster resolution.
- Optimized database design by combining SQL for structured data and MongoDB for flexible storage of descriptions and comments.

Python Developer (AI-Focused) \ May 2024/ June 2024
Arambh Softech

- Expand the machine learning models and integrate a Large Language Model (LLM) for face emotion detection and its prediction.
- Create a web interface using HTML, CSS, JavaScript, and jQuery for real-time interaction and visualization of results.
- Applied model integration with the frontend to enable seamless user input and output display.
- Integrated the trained model with live webcam input to perform real-time emotion prediction.
- Planned a pipeline for image capture → preprocessing → model prediction → output display.
- Built and tested the application in VS Code, ensuring smooth execution and debugging runtime issues.

Software Developer, June 2024/August 2024
Usha Martin

- Contributed to projects using SAP tools, assisting in development, customization, and system support tasks.
- Applied core technical concepts to real-world business problems, improving understanding of enterprise workflows.
- Collaborated with team members to analyze requirements and support project implementation.
- Prepared project presentations and reports for the assistant senior staff.

PERSONAL PROJECTS

SENTINELX-BOT-DETECTION GUARDRAIL

Real-Time Bot Detection & Behavioral Analytics Platform

- Developed a **behavioral biometrics-based system** to detect bots by analyzing user interaction patterns such as clicks, keystrokes, and mouse movements.
- Built a **real-time monitoring dashboard** to track active sessions and classify users as human, suspicious, or bot.
- Implemented a **custom anomaly scoring algorithm** to identify non-human behavior (e.g., no mouse movement, repetitive actions).
- Designed a **spam detection module** using NLP and heuristic techniques to filter malicious user-generated content.
- Created a **session logging system** to store interaction data for auditing and forensic analysis.
- Integrated **frontend and backend for real-time event processing** to ensure continuous monitoring and detection.

NEON AIR DRAW — AI-BASED SPATIAL DRAWING INTERFACE

Designed a human-computer interaction system using computer vision for touchless input

- Built a real-time gesture-controlled drawing web application using React and JavaScript with webcam-based interaction
- Integrated MediaPipe Hands model to track 21 hand landmarks and enable precise finger-based input
- Developed modular React components (hooks, pages, UI controls) for scalable and maintainable architecture
- Implemented a canvas-based rendering system for smooth, continuous drawing with adjustable brush size, opacity, and colors
- Designed a modern neon-themed UI with interactive controls (undo/redo, color palette, stroke scaling & rotation)
- Optimized performance to achieve ~30 FPS real-time tracking and reduced latency in gesture processing
- Managed camera access and browser APIs, ensuring secure and seamless user interaction
- Deployed and tested the application in a live environment for real-world usability

REAL-TIME EMOTION DETECTION (AI/ML Project)

- Developed a real-time face emotion detection system using Python, OpenCV, and machine learning algorithms.
- Collected and pre-processed image datasets by resizing, normalizing, and converting images to grayscale for better model performance.
- Trained classification models on 1000+ images, achieving 80–85% accuracy in emotion detection.
- Integrated live webcam input to perform real-time emotion prediction with minimal latency (1–2 seconds).

MY PORTFOLIO WEBSITE

- Developed a responsive frontend supporting cross-device compatibility, tested across 3+ screen sizes.
- Implemented animated transitions and a multi-section layout for better engagement.

Certifications:

- Dilwado.com Internship Certificate
- Cisco CNN Certification
- Web Developer (Internship) Certificate
- Big Data Analyst Certificate
- AWS Cloud Computing Certificate
- IBM Data Science (Tools of Data Science)
